RF CIRCUITRY AND COMPACT HYBRID FOR WIRELESS COMMUNICATION DEVICES

Abstract of the Disclosure

5

10

15

A compact hybrid comprises reactive power-dividers and signal paths coupling the reactive power-dividers to provide a predetermined phase difference therebetween. The signal paths may have 90-degree bends therein to reduce a distance between adjacent reactive power-dividers to less than a physical distance associated with the predetermined phase difference in a stripline medium. The hybrid may be a 180-degree hybrid and may be part of RF circuitry of a wireless communication device to combine signals from a pair of antennas and to provide a sum signal and a difference signal. The RF circuitry may also comprise switching circuitry to select between the sum signal and the difference signal based on a signal quality of the sum and difference signals.
